

POWER

File: power.kicad_sch

TODO:

- [ok] fix button switch pins, center to boot0 pin
- [ok] fix usb host crystal footprint
- [ok] fix sd detect pins
- [ok] change screen size to larger screen (dual footprint perhaps? not yet)
- [ok] add choice resistor for U.Fl connector or SMD Antenna
- [ok] add missing battery switch charge diode
- change battery connector to vertical (smt?) type [pico blade?]
- [ok] change reset/boot buttons to side mounted

ESP32-S3

INPUT

File: input.kicad_sch

Display

TODO:
Replace with Larger TFT Display.
1.14" -> 1.44" [DONE]

File: Display.kicad_sch

SPEAKER

MIC (PDM for CircuitPython)

Pin Description

PIN		NAME	FUNCTION
WLP	TQFN		
A1	4	SD_MODE	Shutdown and Channel Select. Pull SD_MODE low to place the device in shutdown. In i2S or LJ mode, SD_MODE selects the data channel (Table 5). In TDM mode, SD_MODE and GAIN_SLOT are both used for channel selection (Table 7).
A2	7, 8	VDD	Power-Supply Input
A3	9	OUTP	Positive Speaker Amplifier Output
B1	1	DIN	Digital Input Signal
B2	2	GAIN_SLOT	Gain and Channel Selection. In i2S and LJ mode determines amplifier output gain (Table 8). In TDM mode, used for channel selection with SD_MODE (Table 7). In TDM mode, gain is fixed at 12dB.
B3	10	OUTN	Negative Speaker Amplifier Output
C1	16	BCLK	Bit Clock Input
C2	3, 11, 15	GND	Ground
C3	14	LRCLK	Frame Clock. Left/right clock for i2S and LJ mode. Sync clock for TDM mode.
—	5, 6, 12, 13	N.C.	No Connection
—	—	EP	Exposed Pad. The exposed pad is not internally connected. Connect the exposed page to a solid ground plane for thermal dissipation.

Note:
SD DET_A and DET_B are to complete a circuit like two poles of a switch.
Connect DET_B to GND
Connect DET_A to GPIO as input with pullup.

For SPI Only:
pin2 = CS [dat3/cd]
pin3 = DI [cmd]
pin4 = VDD
pin5 = SCLK [clk]
pin6 = VSS
pin7 = DO [d0]
